

## AEG COMPLETES DOMESTIC PV OFFER WITH SLEEK AND CHIC RESIDENTIAL STORAGE UNIT

Preview of AEG storage unit at Intersolar 2019. The new entry joins the residential inverters and Ultra-Black solar modules in AEG's portfolio, finalising the AEG offer tailored towards premium home solar installations

Frankfurt am Main, May 12, 2019 –Solar Solutions, official supplier of AEG photovoltaic products, expands their offer for the residential segment with an energy storage solution specifically designed for home PV installations and smaller commercial projects. The AEG storage unit (available in Q3, 2019 for the European market) will premiere at Intersolar Europe in Munich, and expand the current product portfolio of solar inverters, PV modules and monitoring solutions for residential and commercial installations.

The new AEG energy storage solution is conceived to meet the needs of small-size residential and commercial installations. With 4 kWh battery capacity, and an integrated hybrid inverter of 3 kWp, it ensures intelligent energy management for the home, harvesting energy from the solar installation to power domestic appliances and redistributing the excess to the grid. The AEG storage unit combines sturdy design and quality materials, with sleek, chic looks in full black to deliver safety and aesthetics for indoor use.

Sleek looks are something the storage unit shares with the newest high-efficiency AEG Ultra-Black monocrystalline solar modules and the domestic mono- and three-phase solar inverters up to 10 kW, also on display at the AEG booth. Customers visiting the AEG stand will also be able to experience first-hand the AEG Individual Module Monitoring (IMM) Technology, integrated in AEG solar modules and also available as smart upgrade for existing installations. The AEG IMM smart monitoring technology leverages the vast data analysis capabilities of artificial intelligence to allow users to easily manage the maintenance of their solar power plant, gaining control of its performance, locating exact technical issues at module level and providing financially optimised maintenance solutions for the whole plant.

With a distribution network that spans today over 40 countries, Solar Solutions looks forward to welcoming their international partners and customers to Intersolar Europe in Munich (May 15-17) in Hall B2, stand B2 374.

### ABOUT AEG

Part of the AEG family with its hundred-year tradition as a leading German brand in the field of electrical appliances owned today by Electrolux Group, AEG quality photovoltaic products stand out for their reliability, aesthetics and enhanced usability. Each AEG product is developed to be always an idea ahead in the world of smart solar to grant users full control over their yields and peace of mind.

AEG solar products -photovoltaic modules, solar inverters, monitoring and storage solutions- are distributed worldwide under license by Solar Solutions GmbH, Germany and brought to the international markets by a solid network of selected local partners.
